Location: Manchester, UK · **Phone:** +44 7349 949871 · **Email:** marvis.osazuwa@hotmail.com · **LinkedIn:** linkedin.com/in/marvisosazuwa · **GitHub:** github.com/marz1307 · **Portfolio:** marvisosazuwa.com

PROFILE

Data Engineer and Analytics Engineer who owns pipelines end to end: Python extractors ingesting 1M+ records across vendor APIs, Dagster orchestration on 5 daily schedules, dbt transformations under CI, Docker deployment on Oracle Cloud at zero infrastructure cost — daily pipeline compute cut ~95% through incremental re-architecture at Force24. The through-line: I make data trustworthy, then I make it predictive — idempotent pipelines, CI-gated transformations, documented runbooks, and a platform that exposes its data to services and LLM agents alike through APIs and a Model Context Protocol (MCP) endpoint. Currently building independent enterprise-grade data projects on the same stack. UK Graduate visa: full right to work in the UK, no sponsorship needed; EU Blue Card eligible for Germany and the EU.

EXPERIENCE

Analytics Engineer · Force24 · Leeds, UK (Hybrid)

Fixed-term contract · January 2026 – April 2026

Marketing automation SaaS. A 16-week collaborative build of a 3-tier customer intelligence platform. Within the team delivery I owned the data layer outright as sole architect and author, was primary author across 8 backend domains, and shipped the customer-facing frontend.

- Sole architect and author of a dbt and Dagster data pipeline that consolidated 4 disconnected business systems into one analytics-ready warehouse on a deduplicated account spine (over 40 dbt models, 5 daily schedules, ~93% solo commit share). Established a single canonical customer ID across the business, which closed the record-matching gaps that had made Customer Success books unjoinable.
- Cut daily pipeline compute by ~95% by re-architecting high-volume revenue models as incremental on an append-only raw layer with deterministic hash IDs. Productionised the platform on Oracle Cloud with idempotent bootstrap, TLS, VPN allowlist, and three-level operator runbooks, so it runs 24/7 at zero infrastructure cost.
- Made support attribution auditor-defensible with a 10-step deterministic classification chain that maps every ticket to exactly one account. This replaced a black-box best-guess join and closed the last open finding in the Customer Success metrics review.
- Gated the build behind 123 dbt tests and 82 pytest tests in GitHub Actions CI, which caught 22 data-quality bugs during the first production run. Silent metric drift now fails a test instead of surfacing in the boardroom.
- Shipped the customer-facing backend and Angular UI (customer list with 10 server-side filters, dashboard and reporting endpoints, sole-author Action Tracker across 7 outcome types), which gave Customer Success a single workflow for retention actions and produced the first labelled outcomes dataset for a planned causal uplift model.

Stack: Dagster, dbt, PostgreSQL, Python, FastAPI, Redis, Angular, Docker, Caddy, Oracle Cloud, GitHub Actions, Git.

CRM Data Specialist · Natural Clinic · Istanbul, Türkiye

June 2024 – January 2025

Healthcare marketing organisation. CRM data and analytics ownership across patient acquisition, conversion, and retention.

- Rebuilt the CRM data layer end to end as the single source of truth for sales, marketing, and clinical operations. Lead response time dropped 30%; conversion rose 15%; duplicates and data errors fell 40%; email engagement rose 25%.
- Replaced weekly manual spreadsheet reporting with real-time Power BI dashboards and exec-ready reports, cutting leadership reporting latency from 7 days to live and freeing ~6 analyst-hours per week on report assembly.
- Integrated the CRM with the marketing automation stack (email, SMS, paid funnels) and engineered customer data flows between CRM, patient management, and marketing tooling, which removed three days a week of manual reconciliation.
- Translated ambiguous stakeholder requests from marketing, clinical operations, and customer service into 12+ shipped data models and dashboards, including the lead-scoring and conversion-funnel models that drove the 15% conversion lift.

Stack: SQL, Python, Power BI, Zoho CRM, marketing automation, workflow automation.

Strategic Data Insights Analyst · Federal Mortgage Bank of Nigeria · Abuja, Nigeria

December 2018 – November 2019

Federal mortgage institution managing Nigeria's national housing fund. Loan portfolio analytics and IT-governance reporting in the Asset Creation Unit of the Loan Administration group.

- Contributed to a data-integrity overhaul that improved core dataset accuracy by 40% in six months, materially reducing the risk of faulty loan approvals.
- Built Python and SQL analytics on top of Tableau to track loan repayment behaviour, supporting a 15% lift in repayment-monitoring efficiency and a 25% reduction in manual data entry.
- Cut IT-asset-governance approval turnaround by 30% by re-mapping the approval workflow and instrumenting stage-level reporting in Tableau, shrinking median time-to-approve across the Loan Administration group.

Stack: Python, SQL, Tableau, Excel.

EDUCATION

MSc Data Science · University of Salford · Manchester, UK

January 2025 – May 2026 · Distinction · Dissertation: Agentic ELT Data Platform for Customer Intelligence

MSc Big Data Analytics and Management · Bahcesehir University · Istanbul, Türkiye

September 2020 – March 2023 · GPA 3.67 / 4.00 · Thesis: distributed PySpark pipeline for football scouting

BEng Computer Engineering · University of Benin · Edo, Nigeria

September 2011 – August 2017

PROJECTS

Agentic ELT Data Platform for Customer Intelligence

MSc Dissertation (Salford) · 2026 · Live B2B SaaS Environment

Solo research build, end to end: every layer designed and written by me alone, from ingestion to the serving API, against a live B2B SaaS environment under NDA. Ran on the same environment as the Force24 contract but is independent work; the Force24 platform itself was a team delivery.

- **Ingestion and warehouse:** custom Python extractors ingested over 1M records from multiple vendor APIs into a JSONB-first PostgreSQL warehouse, orchestrated with Dagster.

- **Serving and agent access:** FastAPI service with JWT auth and Row-Level Security, Angular dashboard, and a Model Context Protocol (MCP) endpoint queryable by any MCP-compatible LLM agent for per-account risk profiling, driver explanations, and intervention recommendations. Output prioritisation surfaced high-risk accounts to CSMs for retention action.
- **Modelling:** 48 dbt models across raw, staging, intermediate, and marts; layered Kimball-style dimensional design.
- **Intelligence stack:** survival analysis (cross-validated C-index ~0.94 on held-out cohort) for time-to-churn; gradient-boosted classification with SHAP explanations (AUC ~0.95 vs ~0.89 logistic baseline) for churn likelihood and drivers; DR-Learner causal inference (econml) correcting reactive-assignment selection bias by ~50 percentage points on the naïve estimator for honest CSM treatment effect.

Python PostgreSQL JSONB dbt Dagster PostgresML XGBoost SHAP Causal Inference Survival Analysis FastAPI Angular MCP

AirWave Express — Relational Database Design for Airport Ticketing

Side Project · 2024 · Aviation / Schema Design

SQL Server schema for an airport ticketing platform covering passenger management, flight scheduling, reservations, ticketing, baggage, and ancillary services. Seven core entities with integrity enforced by construction: SQL Server sequences and triggers for ID generation, CHECK constraints on date ordering, NOT NULL and UNIQUE constraints where they matter (passport numbers, flight codes per date), foreign keys preventing orphan tickets and reservations.

SQL Server T-SQL Schema Design Triggers Sequences Referential Integrity

Equity Forecasting

Side Project · 2025 · Financial Time Series

End-to-end R analysis package for univariate equity forecasting on 5,124 daily NYSE observations. ARIMA, seasonal ARIMA, and ETS through a MODEL_REGISTRY pattern, with formal residual diagnostics (Ljung-Box, Shapiro-Wilk) and stationarity tests (ADF, KPSS) combined into a single decision rule.

R ARIMA ETS Time Series Statistical Testing

Big Data Player Scouting (MSc Thesis)

Bahcesehir Thesis · 2023 · Sports / Big Data

Distributed PySpark pipeline ranking and recommending footballers across five top European leagues using UEFA event data and PlayeRank methodology. 500+ players, hypothesis-driven research. Published thesis, public codebase.

Python PySpark Big Data Recommender Systems

TECHNICAL SKILLS

Languages: SQL, Python (pandas, NumPy, scikit-learn), R, PySpark, T-SQL, Bash
Warehousing & Storage: PostgreSQL (JSONB + GIN), Snowflake, BigQuery, Databricks, SQL Server
Transformation & Orchestration: dbt, Dagster, Apache Spark, Airflow
Service Layer: FastAPI, REST APIs, Docker, Caddy, Model Context Protocol (MCP)
Cloud: AWS, GCP, Azure, Oracle Cloud
Source Control & CI: Git, GitHub, GitHub Actions, pytest
BI & Visualisation: Power BI, Tableau, Looker
ML & Statistics: scikit-learn, XGBoost, PostgresML, scikit-survival, econml (DR-Learner), SHAP, MLflow, RoBERTa, ARIMA, Time Series Analysis, NLP, Sentiment Analysis, TF-IDF, LDA, Causal Inference, Survival Analysis, A/B testing / experimentation
Agentic AI: Model Context Protocol (MCP), agentic ELT, LLM-accessible data layers

LANGUAGES

- **English:** Native
- **German:** B1

CERTIFICATIONS

- Python for Data Science, AI & Development · Coursera
- Generative AI for Business Leaders · Coursera
- Enterprise Design Thinking Practitioner / Team Essentials for AI / Co-Creator · IBM

COMMUNITY & LEADERSHIP

Microsoft Learn Student Ambassador · Bahçeşehir University · Istanbul, Türkiye

January 2021 – September 2023 (2 yrs 9 mo) · Cross-university Azure workshops and a community hackathon with fellow ambassadors and interested learners.

Availability: available immediately for UK roles (UK Graduate visa, no sponsorship needed) and for Germany and the EU (EU Blue Card eligible).
